

Bug Report Compilation

Healthcare Clinic Booking Platform — REQ-FUN-05: Patient Details & Promo Code Engine

Requirement ID: REQ-FUN-05	Reported By: Seif Mohamed
Environment: CareNest Staging (Live App)	Total Bugs: 3
Phase: Day 5 – Test Case Execution & Bug Reports	Date: September 2026

HLTHCR3-124: Promo code input field fails to correctly accept and process the maximum allowed length

Priority	Medium	Related Test Case	HLTHCR3-106
----------	--------	-------------------	-------------

Precondition: User is logged in and has selected an appointment slot.

Steps to Reproduce:

1. Navigate to the Patient Details & Promo Code section.
2. Enter a 15-character alphanumeric code in the Promo Code field (e.g. 'ABCDEFGHIJKLMNO').
3. Observe the value actually captured in the field.

Expected Result: The field accepts the full 15 characters, per REQ-FUN-05 ("Up to 15 chars").

Actual Result: The field truncates input after 10 characters. Only 'ABCDEFGHIJ' was captured; the remaining 5 characters ('KLMNO') were silently dropped.

Business Impact: Low-to-medium direct financial impact, but this is an input-validation defect that could prevent legitimately longer promo codes from ever being entered or redeemed correctly.

HLTHCR3-125: SAVE10 promo code applies a flat 10 EGP discount instead of a 10% percentage discount

Priority	High	Related Test Case	HLTHCR3-119
----------	------	-------------------	-------------

Precondition: User is logged in, has selected an appointment slot, and the consultation fee is 90 EGP.

Steps to Reproduce:

1. Navigate to the Patient Details & Promo Code section.
2. Enter promo code 'SAVE10' in the Promo Code field.
3. Click 'Apply'.
4. Observe the Discount and Total values shown in the booking summary.

Expected Result: Per REQ-FUN-05, SAVE10 deducts 10% of the total fee. For a 90 EGP fee: Discount = 9 EGP, Final Total = 81 EGP.

Actual Result: The system applied a flat 10 EGP discount regardless of the fee amount, resulting in a Final Total of 80 EGP instead of the expected 81 EGP.

Business Impact: High — this is a direct pricing/financial defect. Every patient using SAVE10 receives an incorrect discount amount. On higher-value consultations the gap between the correct 10% discount and the flat 10 EGP applied grows significantly, leading to patients being overcharged relative to the advertised offer.

HLTHCR3-126: BEST-QA promo code discount behavior does not fully match specification

Priority	High (pending confirmation)	Related Test Case	HLTHCR3-122
----------	-----------------------------	-------------------	-------------

Precondition: User is logged in, has selected an appointment slot, and the consultation fee is 90 EGP.

Steps to Reproduce:

1. Navigate to the Patient Details & Promo Code section.
2. Enter promo code 'BEST-QA' in the Promo Code field.
3. Click 'Apply'.
4. Observe the Discount, Total, and confirmation message shown.

Expected Result: Final Total = 0 EGP. Confirmation message displayed: "Discount Applied! You are officially the best QA team."

Actual Result: Under investigation at time of writing — initial execution flagged unexpected behavior (exact discrepancy to be confirmed and documented with a screenshot before this bug is finalized).

Business Impact: Potentially High if the total does not reach exactly 0 EGP, since this would mean the platform's single most generous discount code is not functioning as documented. To be re-verified before final severity is locked in.
