

Requirement Analysis Report

Healthcare Clinic Booking Platform — SRS v1.0.0

Requirement ID: REQ-FUN-05	Module: Module 3 – Booking Engine & Checkout
Feature: Patient Details & Promo Code Engine	Story Points: 5 SP
Phase: Day 1 – Requirement Analysis & Distribution	Jira Story: HLTHCR3-23

As a logged-in patient, I want to enter patient details and apply promo codes to calculate the final consultation price.

1. Feature Breakdown

REQ-FUN-05 was decomposed into three independent sub-features for analysis and test design:

Sub-feature	Description
A. Patient Selection	Toggle between 'Booking for Myself' (default) and 'Booking for Someone Else'.
B. Beneficiary Fields	Conditional fields shown only for 'Someone Else': Beneficiary Name (alpha, 3–50 chars) and Beneficiary Phone (11 digits, Egyptian prefix).
C. Promo Code Engine	Input up to 15 chars (alphanumeric + hyphens), trim + uppercase normalization, three recognized codes with distinct discount logic, plus business rules on reuse and non-negative totals.

2. Detailed Rules Extracted from SRS

2.1 Patient Selection

Rule	Value / Behavior
Default state	'Booking for Myself' selected by default
Conditional fields	Selecting 'Someone Else' makes Beneficiary Name/Phone visible and mandatory

2.2 Beneficiary Field Validation

Field	Rule
Beneficiary Name	Alphabetic characters and spaces only. Min 3, Max 50 characters.
Beneficiary Phone	Exactly 11 digits. Must start with an Egyptian prefix: 010, 011, 012, or 015 (per REQ-FUN-01).

2.3 Promo Code Input & Normalization

Rule	Value
Max length	15 characters
Allowed characters	Alphanumeric + hyphens (-)
Normalization	Leading/trailing spaces trimmed; text converted to uppercase before matching

2.4 Discount Rules per Code

Code	Discount	Special Behavior
SAVE10	10% off total fee	—

Code	Discount	Special Behavior
FLAT50	50 EGP flat deduction	Total floors at 0 EGP if fee < 50
BEST-QA	100% off (Total = 0 EGP)	Displays: "Discount Applied! You are officially the best QA team."
Unrecognized code	No discount	Displays: "Invalid or expired promo code."

2.5 Business Rules

Rule	Description
Single-use per session	A promo code cannot be applied more than once within the same booking session.
Non-negative total	The total fee after discount can never fall below 0 EGP.

3. Applicable QA Test Techniques (per RTM)

Technique	Applies To
Decision Table Testing	Patient Selection toggle; discount outcome per promo code
Boundary Value Analysis	Name length (3/50), phone length (11), promo code length (15), fee vs. discount edge cases
Equivalence Partitioning	Valid/invalid character sets for name, phone, and promo code
Business Rule Testing	Single-use code rule; non-negative total rule

4. Open Questions Raised for Product Manager

- Is promo code matching case-sensitive before normalization, or does normalization happen first (e.g., does 'save10' work identically to 'SAVE10')?
- If the user switches from 'Someone Else' back to 'Myself' and then back to 'Someone Else' again, do previously entered Beneficiary details persist or get cleared?
- Can the Beneficiary Phone be identical to the logged-in patient's own phone number?
- When attempting to apply a second promo code in the same session, does the system show an explicit error, silently ignore the attempt, or replace the first discount?

Prepared as part of Day 1 (Requirement Analysis & Distribution) — Healthcare Clinic Booking Platform QA cycle.
